

2025 Slurry Seal Program

Clinton | Raritan | Delaware | West Amwell Township | Stockton Borough

Date Posted: August 19, 2025

The following roads are scheduled for pavement preservation this year. This consists of micro surfacing, an industrial seal coating treatment designed to extend the life of the road. The County has taken advantage of this low-cost maintenance technique annually since 2021 with good success. On all preservation streets, cracks will be sealed, and asphalt will be patched as needed ahead of micro surface process. Preservation will begin on or about August 4, 2025. Micro surfacing will begin **on or about September 8, 2025**. There may be disruptions to on-street parking and traffic flow during operations. Please expect delays and plan accordingly.

Roads being micro surfaced:

County Route 523 - Dvoor Route 12 Circle to Stockton Borough

County Route 641 - County Route 626 to High Bridge Borough

County Route 626 - Overpass to I-78

County Route 633 - Whole Length
